

CANAMAIZE

CanaMaize™ Seed Inc.

Conventional Corn

CM440

1950 CHU

Product Highlights:

Conventional, early maturing, short statured variety offers growers great grazing yield for high energy fall and winter grazing.

Agronomic Recommendations:

- Soil temperature must be over 10 degrees Celsius
 - **For areas expecting to receive 2100 CHU or less - plant between May 12-16**
 - **For areas expecting to receive 2100 CHU - plant between May 21 and June 10**
- Plant 3/4 to 1 1/2 inches deep
- Recommended Phosphorus, Potassium (K), and Sulphur rates are 37, 82, and 15 lbs per acres respectively
- Nitrogen requirements range between 75 and 95 lbs per acre depending on moisture in the area

Planting Equipment & Seeding Rates:

- No specialized equipment is needed; air seeders, press drills, and hoe drills all work well
- Reduce speed to increase precision of seed placement
- When spacing is 6 inches or less, blocking runs to double the spacing helps to avoid bridging
- If using row planters, adjust seeding rate lower. Better seed placement achieved with row planters means higher emergence.
- ***To maximize grain in biomass:***
 - ***Plant at 24 lbs/acre (50,000 plants/acre)***
 - ***One 25 kg bag will seed 2.3 acres***
- ***To optimize biomass development:***
 - ***Plant at 31 lb - 33.5 lbs per/acre (65,000-70,000 plants/acre)***
 - ***One 25 kg bag will seed 1.64-1.77 acres.***
